The Traditional Bowyer's Bible series is better if you just want to get into building a bow though Paul Comstock's thin little book The Bent Stick is much more straight forward if you want to build a self bow. I have a 1958 edition of the Boy Scout merit badge series on Archery that is even better if you don't have access to a raw limb or tree but have some straight grain lumber.I bought The Bow Builder's Book mainly for my research into the Saami Two-Woods bow. There is not a lot of information about this particular bow and this book didn't really help in my research yet it was a great addition to my bow book library for its overall information.If you have the

money you can't go wrong with Charles Grayson's Traditional Archery from Six Continents. It is a beautiful book with glossy, full color photos about bows and arrows and their history but nothing on building bows. It, also, is unfortunately shy of useful information or photos on the Two-Woods bow but that would be my only complaint. C'mon, you know there is only so much you can read before you just have to get out there and build one. Just do it. 0 of 0 people found the following review helpful. but the person who received it said it was not an easy read, and he had trouble trying to understand ...By Waterstone Turtle gave as a gift, but the person who received it said it was not an easy read, and he had trouble trying to understand some of the basic things about bow building using this book. 0 of 0 people found the following review helpful. coffee table bound By turk182 Good pictorials, Nice generalized ideas and laid out with each specific bow types each in it's own chapter. Some decent color photo sections of random finished bows. Not very in depth involving exacting techniques with a lot of educational information about the distant past uses and origins of bows, yet still a lot of useful information for a prospective bow builder.

Experienced bow builders and practical archaeologists describe the history, evolution and construction of European style longbows in this new and engaging book. For the beginner, clear, uncomplicated instructions are offered, including descriptions of construction techniques, tools, materials, and shooting styles. For more advanced bowyers there are tips on choosing wood and adhesive, and explanations of the evolution/adaptation of bow design, including precise dimensions for replicating special historic bow types, from Stone Age bows to modern laminated longbows. This book also offers comprehensive instructions on how to properly test your newly built longbow and constructing arrows.

About the Author The authors are bow builders and practical archaeologists with many years of experience perfecting bow building and researching the history of the bowyer.
